

Extraction set for hip revisions

Jig-guided system
fitting **optimys** (Mathys)

Handle and extraction bolt

The extraction bolt can be attached on the top or bottom of the handle.

Usable length of chisels

The handle with a quick clamping mechanism offers three fixation positions for the chisels.

In clamping position 2, the working length of the chisel is extended by 15 mm compared to position 1, and by a further 15 mm in position 3. In total, the working length can be extended by 30 mm from position 1 to position 3.

Usable length =
L [mm]

Jig

Guide slots

Guide grooves

The jig-guided chisels are matched to the guide slots and grooves of the corresponding jigs. The chisels are guided through both guide slots (or grooves) until the cutting edge makes contact with the bone. Then the chisels can be driven in with light hammer strikes.

The jig is positioned on the cone of the stem and attached with the fixation screw.

Overview of chisels with jig

**Note: colors are only for illustrative purpose. The products are not color-coded.*
