Teeth designs

Premium teeth design

The Gomina Premium Line of saw blades is characterised by a combination of cross-grinded cutting teeth and straight-grinded raker teeth. This results in optimal cutting efficiency and high precision. The teeth are aligned on a straight line and are asymmetrical, which leads to a high degree of self-centring of the saw blade.

Premium teeth design

Performance teeth design

The Gomina Performance Line of saw blades is characterised by asymmetrical straight-grinded cutting teeth, slightly less aggressive than the Premium Line.

Performance teeth design

Reciprocating teeth designs

The Gomina reciprocating saw blades offers a variety of teeth designs. The cross-grinded cutting teeth (reciprocating aggressive) results in optimal cutting efficiency and high precision.

Reciprocating saw blades with the straight-grinded and symmetrical cutting teeth design are less aggressive. The set teeth allow an excellent sawing performance without jamming. Gomina double-sided reciprocating blades completes the portfolio.

Trauma teeth design

The Gomina trauma saw blades offers the wide product range for the corresponding application. The teeth set allow an excellent sawing performance without jamming.

Small Bone teeth design

The Gomina small bone saw blade is characterised by asymmetrical straight-grinded cutting teeth. These saw blades are mostly used without cutting blocks due the ease for free-hand sawing.

General Saw Blades information

NOTE: All markings on the products in this catalogue are exemplary, positions may differ from the actual marking. The UDI is to be understood as an example. Every article has its individual code.

Packaging

NON-STERILE PACKAGING

Non-sterile saw blades are packaged in single pouches and carry the product label with detailed information (label printed black & white). They don't come in boxes and can be **ordered single** for any desired quantity. Our unsterile saw blades are all reusable.

STERILE PACKAGING

Sterile saw blades are packaged in double sterile pouches which feature an additional protection layer for the cutting edge. Minimal ordering quantity is **one box containing 5 saw blades**. The box also contains one patient label per saw blade, placed between the first and second pouch of each blade. Except for the Reciprocating Keel Blade, all our sterile saw blades are reusable.

About Gomina

Gomina is a leading manufacturer of medical products for bone surgery. We develop and produce our surgical instruments exclusively in Switzerland and market them worldwide. Hightech products from the heart of the Swiss mountains.

Gomina has pioneered the development of effective tooth geometry for oscillating saw blades using a combination of sharpened cutting and raker teeth. This unique combination of saw teeth results in outstanding cutting performance. Gomina's tooth geometry and arrangement minimises any lateral swerve during cutting, simplifying handling for the clinician.

Gomina's Keel Blade with its patented, innovative tooth geometry enables the accurate preparation of grooves without bone fragments.

100% SWISS MADE

The high requirements of saw technology commanded by surgeons form the basis for our innovation. Today our innovative medical products are used routinely in many knee, hip, foot and hand surgeries to the benefit of patients.

PRECISION AND SWISS-QUALITY

Since the founding of Gomina in 1974, we have made it our business to be precise.

Since then, Gomina has become a leader in the production of micro-mechanical precision components.

Precision that is used around the world in medical technology and sensor technology.

PRODUCTION

From the initial blank to the packaged finished unsterile product, Gomina carries out all processing steps in-house, except the sterilization, in compliance with the Swiss Quality Label.

R&D

Our engineering department converts visionary ideas into innovative products. Thanks to the latest technologies we are able to fulfill special customer requests. In close cooperation with the surgeons we are constantly expanding our product portfolio.

Certificates

In compliance with the Swiss Quality Label and the standards of the Medical Device Regulation established by the European Union, Gomina fulfills and ensures the strict requirements for safe and efficient medical products. All Gomina products are MDR-certified. Furthermore we fulfill the quality standards within the ISO 13485.

Our saw blades are certified for reusability, except for the Reciprocating Keel Blade. The valid certificates, instructions for use, processing and cleaning documents can be found online on www.gomina.ch

Compatibility

Gomina is a renowned manufacturer of high quality surgical saw blades for the use in modern orthopaedic, traumatological and reconstructive surgery. Our products are compatible with the power systems of various third party manufacturers established on the market. The compatibility of our replacement saw blades with the different power systems is indicated in this catalogue and on our packaging labels.

Our products are safe and effective to use in, but are not limited to, the power systems of Aesculap, Arthrex, Aygun, Conmed Linvatec Hall, DePuy Synthes, DeSoutter Medical, MatOrtho, MicroAire, Smith & Nephew, Bojin, Stryker and Zimmer Biomet. All trademarks mentioned in this document are registered trademarks of the respective companies. Gomina has no association with or is in any way affiliated with the mentioned companies. Data is correct at the time of publishing and its subject to change without notice.

In the past, uncertainty arose among some users, whether or not it is permitted to use Gomina saw blades (third party product) with their power systems, or if they are obliged to use the „original accessories“ provided by the manufacturer of the power system. This is due to ambiguous statements in the IFUs of some power systems or to misleading information given by the employees of individual power system manufacturers or distributors.

In this context, we would like to confirm that the use of Gomina's surgical saw blades in the power systems specified by us is definitively legally permitted and safe.

For any questions or additional information, please contact us.
